

Lia — how a Reddit reply is produced

Every posted comment passes a named human approver at the business. Nothing posts automatically.

What Lia never does

- Post, reply, or edit without a named human approval
- Post under a Lia-owned account, persona, or pseudonym
- Vote, send private messages, or take moderation actions
- Create Reddit accounts, or post proactively into threads
- Sell, license, or redistribute Reddit content
- Train machine-learning models on Reddit content

Gates enforced in code, all failing closed

- REDDIT_ROLLOUT_STAGE: off | read_only | read_write, default off
- REDDIT_AI_INFERENCE: separate switch, so monitoring can ship without drafting if the agreement requires it
- REDDIT_ACCESS_APPROVAL_REF: a dated marker naming the agreement, required before anything calls Reddit at all
- Credentials sealed with AES-256-GCM; never leave the server
